Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 2; Length 166276;

                                                                                                                                           This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J., and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries Genomics 51:1-8 The Clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-450E9; the clone sequenced to the right is RP11-685N3. Actual start of this clone is at base position 1 of RP11-601N4; actual end is at base position 176555 of RP11-601N4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Data from AC062029 and AC060807 was used to finish this clone, AC023416. Polymorphisms have been identified between AC023416 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (NID:g1437298) zh81a02.rl"
                                                                                                                                                                                                                                                                                                                                                                   MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Mo. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence of AC023416 has been incorporated into AC096579.

HSIGKA.	4952
DEFINITION ACCESSION	A. Sapiens DNA for IG kappa JC region. X67858
VERSION KEYWORDS SOURCE	X6785 Ig ka Homo
ORGANIS	ns Metazoa, Chordata, Craniata, Vertebrata, E
REFERENCE	Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1. (bases 1 to 5364)
AUTHORS	Garrard, W.T. Direct Submission
AL	Submitted (23-JUL-1992) W.T. Garrard, UT Southwestern Medical Contre, Department of Biochemistry, 5323 Harry Hines Blvd., Dallas
REFERENCE AUTHORS	1A 5235, USA 2 (bases 1 to 5364) Whitehurer, C., Henney, H.R., Max, B.E., Schroeder, H.W. Jr.,
	Stuber, F., Siminovitch, K.A. and Garrard, W.T.
97111	Nucleoride Sequence of the intton of the germine number Agipa immunoglobulin gene connecting the J and C regions reveals a matrix
JOURNAL	association region (PA) near co the emission (1992)

/ Inote="Organ: Stemach; Vector: pCNS; Site 1: EcoRI;
Site 2: NoII; The poly (A) + RNA was dephosphorylated with
batte_2: NoII; The poly (A) + RNA was dephosphorylated with
tabacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including EcoR
I site by treatment of T4 RNA ligase and the first strand
cDNA was synthesized from oligo dT-selected mRNA by
priming with dT-tailed vector. The dT-tailed vector was
adjusted to have about 60nt. The CDNA vector was
circularized with E. coll DNA ligase after digestion of
EcoRI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
obtained cDNA vectors were used for transformation of
competent cells E. coli Toplof' by electroporation method.
The CDNA libraries constructed by this method are
full-length enriched CDNA library."

The sequence contained an olispo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A trail. Tissue Procurement: Louis M. Staudt, M.D., Ph.D.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
modified polylinker; Site 1: ECOR I; Site 2: Not I;
UI-CF-EC1 is a normalized CDNA library containing the
following tissue(s): Normal lung from adult and from fetal
day 64, day 87, week 19 and week 42. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome. Research, 6:791-806, 1996. First strand CDNA
Synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded CDNA was ligated to an ECOR I
adaptor, digested with Not I, and cloned directionally
into pT773-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand CDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
AAGTCCTTAC.

NOI CGAP Cart is a CDNA library containing the following tissue(s): Osteoarthritic Cartilage The library was constructed according to Bonaldo, Lennon and Soares synthesis was primed with an oligo-dr primer containing a genome Research, 6:791-806, 1996. First strand CDNA Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Dp
                                                                                                                                                                                                                                                                                                                                                                                       The invention relates a humanised antibody that specifically binds an epitope contained within positions 13-28 of amyloid beta peptide, Abeta. The antibody is useful to inhibit and reduce the formation of amyloid plaques or the effects of toxic soluble Abeta species in humans their fragments are used for the manufacture of a medicant. This includes the prolonged expression of recombinant sequences of them in human tissues for the treatment of clinical/pre-clinical Alzheimer's disease, Down's syndrome or pre clinical/pre-clinical Alzheimer's disease, Specifically, the antibody is used to sequester Abeta into plasma, brain or cerebrospinal fluid to prevent freverse accumulation of the Abeta sequence encodes the light chain of a humanised monoclonal antibody, Hu266, based on the mouse antibody 266.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CCACTCTCCCTGCCTGTCACCCTTGGACAACCAGCCTCCATCTCTTGCAGATCTAGTCAG 149

                                                                                 The sequence is that of a plasmid expressing a structurally altered BR96 antibody, having the variable region of BR96 and a modified variable region. It can be used in the production of the structurally altered antibodies which are useful for the treatment of cancer and carcinomas in vivo, especially when conjugated to cytotoxic agents. Structurally altered BR96 Ab is used, especially conjugated to doxorubicin, to treat proliferative type diseases where a cell has a BR96 antigen on the cell surface. The chimeric and humanised BR96 Ab are also used in the methods to inhibit and prevent BR96-induced toxicity resulting from immunotherapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CCAGTCTCCCTGCCTGTCATGAGAGATCAAGCGTCCATCTTGCAGATCAAGTCAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence is that of a plasmid expressing a structurally altered BR96 antibody, having the variable region of BR96 and a modified variable region. It can be used in the production of the structurally altered antibodies which are useful for the treatment of cancer and carcinomas in vivo, especially when conjugated to cyctocoxic.egents. Structurally altered BR96 Ab is used, especially conjugated to doxocubicin, to treat proliferative type diseases where a cell has a BR96 antigen on the cell surface. The chimeric and humanised BR96 Ab are also used in the methods to inhibit and prevent BR96-induced toxicity resulting from immunotherapy for cancer.

                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents an expression vector for expressing the light chain of a chimeric anti-CD40 antibody designated chi220. The antibodies are effective in modulating humoral immune response against T cell dependent antigens, collagen induced arthitis and transplant induced rejection. They are also useful for their anti-inflammatory properties. The antibodies have wide therapeutic applications, including autoimmune and inflammatory diseases and transplantation. The antibody can be used in a pharmaceutical composition for treating a patient suffering from a T cell mediated disorder. They can also be used to treat autoimmune diseases, inflammatory diseases, and transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 129 ACTATTAGCTGCAAATCCAGTCAGAGTCTGCTCAACAGTAGAACCCGGAGAACTACTTG 188

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACCATCAGCAGTCTGCAGGCTGAAGACGTGGCAGTTTATTACTGCAGCCAATCTTATA-- 366
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       462
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             522
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence shows the expression vector encoding the light chain of the chimerised anti-human monoclonal antibody (mAb), Chi220. Chi220 binds to human CD40 (or its active portion). It comprises murine variable and human kappa and gamma I constant regions. It binds to CD40 and effectively blocks humoral immune responses to T cell-dependent antigens in a dose dependant fashion. The antibodies of the invention are useful for modulating humoral immune responses against T cell-dependent antigens, collagen induced arthritis, and skin and kidney transplant rejection and are also useful for their anti-inflammatory properties. They are useful for treating autoimmune disease such as type I diabetes, psoriasis multiple sclerosis, rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                    New humanized anti-human CD40 antibodies which block interaction between gp39 and CD40 for modulating humoral immune responses against T cell-dependent antigens, collagen induced arthritis, and transplant

Vector pMDR1007

```
The sequence given is the insert of the vector pWDR1007. pWDR1006

(see AAQ30919) and pSAB132 (see AAQ30906) were used in the construction of this vector. Three fragments were ligated together to generate this vector. Three fragment of pWDR986 (see AAQ30913), a 3442bp AatII/

ECORV fragment of pWDR986 (see AAQ30918) and a 326 bp ECORV/BgIII of ECORV fragment of pWDR1006 was used to transform E. Coli JA221(Jq) to ampticillin resistance. pWDR1006 was transform E. Coli JA221(Jq) to ampticillin resistance. pWDR1006 was cleaved with Norl and the 1693 bp fragment isolated was ligated into Norl linearised pSAB132 which had been dephosphorylated by calf alkaline phosphatese. This generates the plasmid pMDR100? The melting agarcse and used to transform E. Coli JA221(Iq) to ampticillin resistance. The pWDR1007 insert comprises DNA encoding, in a 5' to 3' order, the immunoglobulin kappa chain signal peptide, amino acid (AA) cresistance. The pWDR1007 insert comprises DNA encoding, in a 5' to 3' order, the immunoglobulin kappa chain signal peptide, amino acid (AA) cresistance. The pWDR1007 insert comprises DNA encoding plate chain constant region (LC). The polypeptide encoded by genomic DNA encoding AA108-AA214 of the human kappa light chain, ie the light chain constant region (LC). The polypeptide encoded by pMDR1007 is an antibody homolog which was shown to bind to cota but did not block the binding of gg120 to CD4. CD4 is a cells! The homolog clocked HIV-induced syncytia formation. This homolog can be used in the detection, prophylaxis and treatment of diseases caused by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the expression vector pAH4611.

This vector was produced from the plasmid pA64270. pA64270

This vector was produced from the plasmid pA64270.

It is the expression vector for the light chain variable region (VL) of the antibody 128.1 which was obtained by PCR with leader/J region priming (see also AA043842). The vector also contains an ampicillin resistance gene, a gpt (mycophenolic acid resistance) selected marker, an immunoglobulin H enhancer and an intron for V-constant region splicing.

C Transcription of the CH gene is from the VH promoder of the murine 27.44 gene. The cloning of the 128.1 VL region was accomplished in two stages with the production of plasmid pS44271 as an intermediate vector which lacks the promoter region. This plasmid was used in conjunction with pAH4602 in the production of the chimeric antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjudate in which it is invested to a neuropharmaceutical or disagnestic agent. The

The sequence given is the insert of the intermediate plasmid pMDR986.

DMDR996 was constructed to carry genomic DNA encoding amino acid (AA) and the sequence but as constructed to a human kappa light chain ie. the light chain onstant region (LC). Human placental genomic DNA was prepared and cleaved with EcoRI to give a 2.5 Kb fragment. This fragment comprising the with EcoRI to give a 2.5 Kb fragment. This fragment comprising the kappa chain constant region was cloned into the EcoRI site of pUGB to give pABB. The DNA encoding LC was amplified from pABB using the primer sequences given in AAQ30914-15. The 1240 bp reaction product was ligated into EcoRV linearised pNN03 (see AAQ30565) that had been dephosphorylated. This generated plasmid pSAB153 (see AAQ30916). LC was amplified from pSAB153 using the primers given in AAQ30915 and AAQ30917 to generate an approx. 1276 bp fragment. This fragment was igated to EcoRV linearised pNN03 that had been dephosphorylated by the presence of a 1122 bp Ecololo9 I restriction fragment. E. Coli GA22(IG) to ampliciallin resistance. Plasmid pMNR986 was used to transform E. Coli GA229, which does not methylate its own DNA. Sequence analysis of pMDR986 showed that a cloning artifact caused a NorI site 3' of the constant region to be been replaced with a Pvul site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       24 TICLAAACICTGAGGGGGTCGGATGACGTGGCCATTCTTTGCCTAAAGCATTGAGTTAC
